

VIU INTRODUCES NEW INFINIDDEPTH™ PRINT TECHNOLOGY

October 18, 2006

SAN BERNARDINO, CA –

Virtual Images Unlimited (www.viu.com) and its sister company, Travel Tags, Inc., leading manufacturers of unique plastic printing technologies, are pleased to announce a new product line featuring Infinidepth™, a unique, patent pending 3D printing technology.

VIU's patent pending Infinidepth™ print technology provides superior depth effects at almost any viewing angle. Marketers and advertisers can choose or create a background that will be viewed in 3D behind their traditional printing. This print technology can be used in any product that VIU offers, including packaging, drinkware, point-of-purchase displays, and promotional products. The process dramatically increases the visual impact of the products it's used on.

"This is a significant advancement that will greatly benefit advertising and marketing clients who are looking for a way to increase the impact of their marketing pieces without adding significant costs" stated Dave Corey. Corey continued, "this technology is a bridge to allow more clients to offer stunning 3D visuals and graphically-appealing marketing products at an affordable price."
